

TURF SYSTEMS

Advanced Turf

Advanced Turf

Netlon Advanced Turf consists of a specially prepared rootzone into which is blended thousands of small interlocking mesh elements. Washed turf or seed is used to establish grass cover.

As the grass roots develop they penetrate through the mesh to form a deep anchored root system and a very stable rootzone.

The result is a free draining natural grass surface with no visible structures but with high load bearing capabilities.

Netlon Advanced Turf is supported by over a decade of high level civil engineering and turf grass research.*

green solutions for:

fire & service access roads | overspill parking | walkways | verges

sportsfields | amenity areas | events areas | helipads

Advanced Turf | Flexipave | TurfGuard

TURF SYSTEMS

Advanced Turf

benefits

- **Attractive, natural grass surface**
- **High load bearing capabilities**
- **Resists rutting**
- **Rapid surface drainage**

suitability

- Events areas
- Emergency vehicle access roads (inc. HGV)
- Overspill car parks
- Sports surfaces
- Amenity areas.

installation

Each application of Netlon Advanced Turf is different. Netlon's technical specialists can provide full technical specifications and advice on installation

Please contact Netlon Turf Systems at the address below for further information on this and associated products.

**Copies of research studies available on request*
